1. Overview

- 1.1 These specifications define projector control commands for PLV-Z2000.
- 1.2 The projector control commands are used to control a projector through RS-232C from a computer.

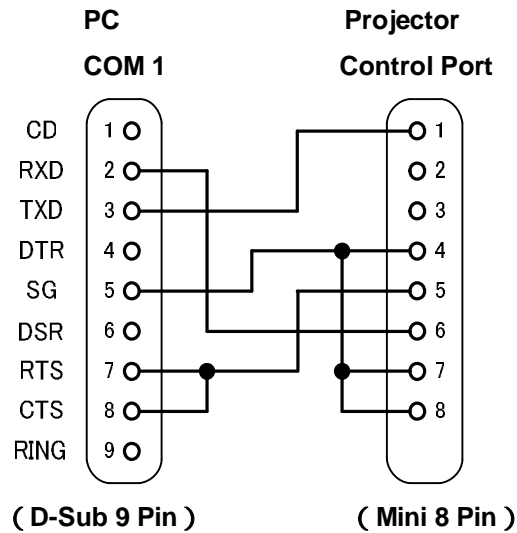

2. Serial Interface Specification

Items	Specification
Synchronous system	Asynchronous
Transmission Speed	9600 / 19200
Data Length	8 bit
Parity	N/A
Stop Bit	1
Flow Control	N/A

- 1) Transmission speed: initial setting value is 19200.
- 2) Transmission speed can be changed in service mode.

3. Connection

Dedicated serial cable must be used for a connection to a computer and a projector.

4. Notes for Communication

- 4.1 The projector command is defined as one command/one line that starts with “C” and ends with carriage return (0x0D).
- 4.2 When the projector receives carriage return, it starts decoding.
- 4.3 There are two types of commands: Functional Execution Commands and Status Read Commands.
 Example of Functional Execution Command: “C05” [CR]
 Example of Status Read Command: “CR0” [CR]
- 4.4 It clears the information of buffer as below.
- 4.4.1 The projector receives LF (0x0A) or EOF (0x1A).
- 4.4.2 When it takes more than one second to receive one command.
 (Until the projector returns carriage return since it has received the first data.)
- 4.5 When control command pipelining, wait the interval of time after the response as below.
- 4.5.1 [VOLUME +/-] Commands —————> 100ms
- 4.5.2 Other Commands —————> 500ms
- 4.6 When Status Read command pipelining, wait at least 500ms after the response.
- 4.7 Do not issue any command before receiving the response except there is no response for 5 seconds.
- 4.8 It takes about 7 seconds for the internal initialization after plugging in AC. During this time, it cannot process commands. Do not issue any command.
- 4.9 For 7 seconds after Power ON from Standby, the projector receives a command and returns the response but does not execute it because of the internal initialization or Lamp processing. However, Status Read Commands are carried out after 500 ms when receiving the response to Power ON command.
- 4.10 About Count Down and the performance during Cooling Down:
 When receiving a command during Count Down after Power ON or Cooling Down after Power OFF, the projector returns the response but does not carry it out. However, Status Read Commands are carried out.
- 4.11 The performance for switching Input:
 It takes 5 seconds to switch Input after receiving the command. When receiving the command during this time, it is not executed. However, Status Read Commands are carried out after 500ms since it receives the response to switching Input command.
- 4.12 The number of character of response to Status Read Commands depends on commands. Please see [8. Status Read Commands].
- 4.13 Characters for commands must be Capital (A - Z).

"C" COMMAND [CR]

Command: two characters (See Basic Functional Execution Command Table)

7.1.2 A projector changes received data to decode and returns a result after being ready to receive next command.

[ACK] [CR]: (0x06, 0x0D) When received Functional Execution Commands.

"?" [CR]: When the received data cannot be decoded.

7.2. Command Pipelining

When some functions need the command pipelining, the performance is the same as that of the remote control.

7.2.1. System: issue any command every 100 ms.

7.2.2. When receiving the appropriate command, the function is executed for 120 ms from the moment.

7.2.3. When receiving the same command continuously within 120 ms, the function is executed for another 120 ms from the moment.

7.2.4. When there is no incoming command after 120 ms, the execution of pipelining is stopped.

7.2.5. When the projector receives other incoming commands within 120ms, the execution of pipelining is stopped.

7.3. Transfer Example

Switch input mode for the projector to Video Mode with Basic Command.

Command	“CR0”[CR]	
Details	Get the projector status	
Response	Acceptable	“%1”[CR]
	%1	“00” = Power ON “80” = Standby (Normal Standby) Impossible to respond during Super Standby “40” = Processing Countdown “20” = Processing Cooling down “10” = Power Failure “28” = Processing cooling down due to abnormal temperature “88” = Standby after cooling down due to abnormal temperature Standby due to door failure “24” = Processing Power Save / Cooling down “04” = Power Save “21” = Processing Cooling down after OFF due to lamp failure “81” = Standby after Cooling down due to lamp failure
	Unacceptable	“?”[CR]

【 Details for Response 】

“00”[CR]

Status: Power ON
Normal image is on-screen.

“80”[CR]

Status: Standby
(Z2000:This status can be read in only Normal Standby mode, not in Super standby mode)

When the status is Power ON and Power OFF Command (“C01”[CR], “C02”[CR]) is executed, it moves to Cooling down. This status automatically moves to Standby when lamp is turned off and the fan spin finishes after 60 seconds. The fan spin time depends on models.
This function is used to cool down lamps and other optical parts, and is quite important to projector’s reliability. During this time, Control Commands are invalid.

“10”[CR]

Status: Power Failure
When the power supply voltage inside the projector reaches abnormal status, the projector is automatically turned off. The projector returns “10”[CR], which shows it moves to Power OFF status due to power failure.

“28”[CR]

Status: Processing cooling down due to abnormal temperature
When the inside temperature becomes abnormally high, it automatically starts Cooling down. Response for this status is “28”[CR].
Even if the temperature decreases during this process, Cooling down is executed.

“88”[CR]

Status: Standby after Cooling Down due to abnormal temperature
The projector status is restored from abnormal temperature.
When the status moves to Standby after Cooling Down due to abnormal temperature, it returns “88”[CR].
This shows the status turns to Standby because of abnormal temperature and door

failure.

This status maintains until next operation is done, When Power On is executed, the information of abnormal temperature is canceled and normal operation is executed.

“24”[CR]

Status: Processing Power Save / Cooling Down

When Power Management function in the Setting menu works and no signal is received for 5 minutes, lamps are turned off and the status goes to Power Save / Cooling Down.

(During this time, the green LED of the projector is off)

During this time, Functional Execution Commands are invalid. (Not executed)

The status moves to Power Save at set hours after the operation of Cooling Down.

When a projector is turned off because of lamp failure, it starts Cooling Down automatically. It returns “21”[CR].

The response command “21”[CR] maintains during Cooling Down.

“81”[CR]

Status: Standby after Cooling Down due to lamp failure

When the status moves to Standby after Cooling Down due to lamp failure, it returns “81” [CR]. This shows the status turns to Standby because of lamp failure. This status stays until next operation is executed.

When Power ON is executed, the information of lamp failure is canceled and normal operation is executed.
